Unit G495: Field and Particle Pictures

### Mark Scheme for June 2011

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

#### Section A

| Qu | esti | ion | Expected Answers   | Marks | Additional Guidance  |
|----|------|-----|--|-------|--|
| 1  | а    |     | beta(1)  | 1     |  |
|    | b    |     | alpha, positron(1)   | 1     | order unimportant.   |
|    | С    |     | neutrino, positron, beta(1)  | 1     | order unimportant.   |
| 2  | а    |     | (electric) field strength or electric field (strength) (1)   | 1     | Not "field" on its own   |
|    | b    |     | positive V (1)   | 1     | Accept negative gradient<br>Or V decreases <u>as r increases</u><br>Accept answers relating to positive quadrant   |
| 3  | а    |     | Force at right angles to motion / a centripetal force (1)  | 1     | Do not accept simply right angles to particle<br>Accept vector product   |
|    | b    |     | electron slowed / loses energy or momentum / collisions with gas particles   | 1     |  |
| 4  |      |     | F =<br>$(9.0 \times 10^9 \times 1.6 \times 10^{-19} \times (-)1.6 \times 10^{-19})/(5 \times 10^{-11})^2(1)$<br>= (-) 9.2 × 10 <sup>-8</sup> (1) N | 2     | Look for correct calculation. Method (1), evaluation (1)<br>POT error -1<br>No sig fig penalty. Do not accept 9.0.<br>Accept bald answer.                                |
| 5  | а    |     | $0.03 \times 20 \times 10^{-6} \times 290\ 000 \times 25 = 4\ (1)$   | 1     | Accept 5<br>Integer answer only  |
|    | b    |     | Financial reasons / risk benefit analysis (1)  | 1     | e.g. comparison of risk from tuberculosis and x-rays<br>ecf from part (a)<br>Accept reduced risk of cancer.  |
| 6  | а    |     | Three different transitions possible between levels / three transitions marked on diagram (1)  | 1     | Beware contradiction.<br>Ignore directions of transitions.   |
|    | b    |     | energy change = 13.6 -1.5 eV (1) = 12.1 x 1.6 x $10^{-19}$ J<br>f = 12.1 x 1.6 x $10^{-19}$ / 6.6 x $10^{-34}$ (1)<br>= 2.9 x $10^{15}$ Hz         | 2     | Own value or clear working.<br>Not 3.3 or 2.47.<br>$12.1 \times 1.6 \times 10^{-19} = 1.936 \times 10^{-18} \text{ J}$   |
| 7  | а    |     | two of: shorter core, fatter core/ greater cross-section area, greater permeability.(2) AW   | 2     | Not bigger core, not laminations. Accept area but not surface<br>area.<br>Not permeance.<br>If more than two suggestions accept correct two if<br>contradiction avoided. |
|    | b    |     | conductance(1)   | 1     |  |

| G49 | G495     |  | Mark  | June 2011 |   |
|-----|----------|--|---|-----------|---|
| Qu  | Question |  | Expected Answers  | Marks     | Additional Guidance   |
| 8   |          |  | Alternating current produces alternating flux (1)<br>the flux links the secondary coil (1)<br>alternating flux induces (alternating) emf. (1) | 3         | Accept changing instead of alternating<br>For third mark accept answer explaining secondary emf<br>alternating because (rate of change of) flux alternates.<br>3 <sup>rd</sup> marking point likely to include 2 <sup>nd</sup> one.<br>Equation without explanation is not sufficient for 3 <sup>rd</sup> mark. |
|     |          |  | Total Section A   | [20]      |   |

#### Section B

| Qu | esti | on | Expected Answers   | Marks | Additional Guidance  |
|----|------|----|--|-------|--|
| 9  | а    |    | E = V/d = 4900/0.065(1) = 7.5 x 10 <sup>4</sup> V m <sup>-1</sup> (1)  | 2     | Need own value.  |
|    | b    |    | $V = J C^{-1} \text{ or } J = N m (1)$<br>Then V = Nm C <sup>-1</sup> => Vm <sup>-1</sup> = N C <sup>-1</sup> (1)  | 2     | Need clear explanation.<br>Accept clear alternative routes e.g. from formula for potential   |
|    | С    | i  | $F = 4.2 \times 10^{-4} \times 2.5 \times 10^{-3} (1) = 1.05 \times 10^{-6} N$ (1)   | 2     | Must show working <b>AND</b> own value for two marks.  |
|    |      | ii | $q = F/E = 1.05 \times 10^{-6}/7.5 \times 10^{4} (1)$<br>= 1.39 x 10 <sup>-11</sup><br>number = 1.39 x 10 <sup>-11</sup> /1.6 x 10 <sup>-19</sup> = 8.7 x 10 <sup>7</sup> (1)<br>= 9 x 10 <sup>7</sup> (1) to one sig fig                            | 3     | Could use combinations of 8 x $10^4$ and 1 $\mu$ N => answers of 7.8, 8.2<br>and 8.3 giving final answer of 8 x $10^7$<br>OR could use 1.1 $\mu$ N giving 8.6 or 9.2 leading to final answer of $9x10^7$<br>Only accept one sig fig. for final answer.   |
|    | d    |    | <ul> <li>Any 4 from:</li> <li>beta particles ionise air</li> <li>(free) electrons attracted to ball</li> <li>Ball charge is reduced / neutralised</li> <li>(downwards) Force on ball due to field<br/>is reduced</li> <li>Ball will rise.</li> </ul> | 4     | <ul> <li>For second bullet and third bullet points accept</li> <li>beta hit ball and ball becomes less positive/more negative</li> <li>OR beta attracted to ball and ball becomes less positive</li> <li>OR beta attracted to positive plate and plate charge is neutralised/reduced</li> <li>Do not accept ionises the ball</li> <li>QWC: 4<sup>th</sup> mark only awarded if clarity of expression shown and the answer is clearly ordered.</li> </ul> |
|    |      |    | Total  | [13]  |  |

| Qu | Question |    | Expected Answers  | Marks | Additional Guidance   |
|----|----------|----|---|-------|---|
| 10 | а        |    | Equal spacing of field lines (1)<br>Greater spacing (outside scanner) OWTTE(1)  | 2     | Not Constant Distance – must refer to distance apart or separation.   |
|    | b        | i  | flux = $\pi \times 0.70 \times (9 \times 10^{-3})^2$ (1) = 1.8 x 10 <sup>-4</sup> (1)   | 2     | $\pi r^2 = 2.545 \times 10^{-4}$  |
|    | b        | ii | No flux change(1) ,<br>and emf is (proportional) to rate of change of flux<br>(1)   | 2     | Credit Faraday equation as part of reasoned argument<br>Do not accept flux cutting arguments  |
|    | С        |    | $Emf = 1.8 \times 10^{-4} / 0.4 (1) = 4.5 \times 10^{-4} V(1)$<br>Calculation assumes constant rate of change<br>of area (or flux) (1) AW | 3     | Ecf from b(i)<br>e.g. $7.125 \times 10^{-4}$ Wb leads to $1.8 \times 10^{-3}$ V;<br>OR $2.268 \times 10^{-4}$ Wb leads to $0.57 \times 10^{-3}$ V;<br>OR $3.958 \times 10^{-2}$ Wb leads to 99 $\times 10^{-3}$ V<br>Do not accept flux cutting arguments |
|    |          |    | Total   | [9]   |   |

| Qu | esti | on | Expected Answers   | Marks | Additional Guidance  |
|----|------|----|--|-------|--|
| 11 | а    | i  | N = $(7 \times 10^4 \times 9.2 \times 10^8)/\ln 2$ (1)<br>= 9.3 x 10 <sup>13</sup> (1)   | 2     | Evaluation of $\lambda$ to 7.53 x 10 <sup>-10</sup> s <sup>-1</sup> (1)<br>Need own answer and clear working for 2 marks   |
|    |      | ii | minimum figure as it assumes all beta particles released are accounted for (1)   | 1     | e.g. some evade detection or are absorbed  |
|    | b    | i  | 0.11 – 0.12 MeV(1)   | 1     | Any explicit statement to peak in range.   |
|    |      | ï  | (Graph shows) beta particles have range of<br>energies (1)<br>Energy conserved in emission process (1)<br>So remaining energy taken away by other<br>particles.(1) | 3     | Allow implied range eg. Most betas have energy less than 0.5 MeV<br>Must have clear reference to energy conservation<br>Allow 'excess energy used to create extra particles'                         |
|    | С    |    | $\gamma = (0.511 + 0.45) / 0.511(1) = 1.88 (1)$<br>$1.88 = 1/(1 - v^2/c^2)^{1/2}(1)$<br>$v = 2.54 \times 10^8 \text{ m s}^{-1}(1)$                                 | 4     | Incorrect $\gamma$ equated to $1/(1 - v^2/c^2)^{1/2}$ gains one mark.<br>Ignore subsequent evaluation.<br>$\gamma = 1.9$ gives 2.55 x $10^8$ m s <sup>-1</sup><br>Bald correct answer earns 4 marks. |
|    |      |    | Total  | [11]  |  |
